SANSKAR JAIN

AI-POWERED FULL-STACK DEVELOPER

+91 - 7231878863 | sanskarjain2001@outlook.com | https://www.linkedin.com/in/jainsanskar

Full-stack developer who ships production systems fast using AI-assisted development workflows — while owning every architectural decision and every line of code. Comfortable across backend services (Java/Spring Boot, Node), modern frontends (Next.js/React), and offline-first data sync. Led two real-world client projects, built a production-grade POS & warehouse management system, and shipped a sub-₹3K IoT health wearable.

SKILLS

Languages	Java · JavaScript · Python · SQL
Backend	Spring Boot · REST APIs · Microservices · MongoDB . Supabase/PostgreSQL
Frontend	Next.js · React · HTML/CSS · Shopify . GSAP
AI Tooling	AI-assisted development workflows . LLM API integration . Prompt-driven feature design
Tools	Git · Linux · XAMPP · IoT Sensors

EXPERIENCE

Prekies Babycare - Website & Technical Head Feb`26 - Present

- Designed and built the company website end-to-end (planning, UI/UX structuring, deployment), including product showcasing and navigation/performance optimization.
- Own all technical and website infrastructure decisions for the brand, from feature builds to deployment and maintenance.

Karwaanfilms.com - Project Lead July`23 - Jan`24

- Led a talented team to develop karwaanfilms.com, a platform curating human-centric documentaries, photos, and videos using Next.js (Frontend) and MongoDB (Backend).Coordinated testing and validation, ensuring compliance with industry standards.
- Owned end-to-end delivery — architecture, testing/validation, and deployment — for a scalable, high-performance platform.

Littlefeetngo.com - Website Developer NGO Project

- Designed and built littlefeetngo.com for an NGO teaching children ages 3–10, from information architecture to deployment.

PROJECTS

Prekies PO System — POS & Warehouse Management Prekies Babycare

- Architected a production-grade POS and inventory system on Next.js and Supabase/PostgreSQL, with atomic stock deduction and full audit trails to guarantee data integrity under concurrent transactions

Tripwise - AI Powered Travel Planning Platform

- Designed and launched an AI travel assistant that generates curated, personalized itineraries by integrating LLM APIs for destination and activity recommendations.
- Built the recommendation and routing logic end-to-end to turn free-form trip goals into structured, actionable itineraries.
